## **Protection Varnish 1232**

This protection varnish was developed especially for the finishing of printed matters realised on matt coated papers.

---

**PROPERTIES**

---

- supports the matt/gloss contrast
- very good coating film
- excellent rub resistance
- problem free processing with and without water
- short drying time
- can also be used wet in wet

The particular advantage of this varnish is that the matt character of the substrate after the printing process is guaranteed and simultaneously the silk matt finishing of the printed image on the matt-coated paper remains.

The contrast matt/gloss therefore remains even after finishing!

This varnish produces a very hard film coating and therefore offers an excellent rub resistance.

The problem free processing with and without water allows also spot varnishing of certain areas of the print product.

This technical instruction sheet is designed for your information and reference. It is based on and conforms to our current knowledge. However as actual application is affected by many factors over which we have no control, we are not liable for printing failures.
